PROFILE

Puck Wang is an early-career software developer who has played versatile roles in full-stack development. He adopts agile principles and test-driven development to deliver features with a strong sense of ownership. Constantly driven by innovation, he is never satisfied with the current tech stack and actively seeks out the latest technologies and solutions to enhance the development environment and improve system resilience.

WORK EXPERIENCE

Full Stack Software Developer

01/2023 — 12/2023

Solace Inc

Kanata, ON

- **Tech stack:** Spring Boot, React, MySQL
- Enhanced the integration of runtime event brokers for the Solace Cloud Platform with **Spring Boot** microservices and **React** micro-frontend architectures.
- Designed and developed **RESTful APIs** to enable real-time scan feedback loop, configuration-as-code broker scanning, and graph-based relation visualization.
- Integrated backend-based user activity analysis with **Mixpanel**, tracking user behavior and retention during **A/B testing**.
- Spearheaded the roll-out plan of **Amazon RDS migration** from version 5.7 to 8.0, ensuring minimal microservice downtime.
- Adopted test-driven development, improving test coverage of **JUnit** integration tests, **Jest** Unit test and **Cypress** end-to-end tests from 65% to 85%.

Software Developer

03/2023 — 06/2023

University of Ottawa

Ottawa, ON

- **Tech stack:** React, Express.js, MySQL, Redis, Docker, Nginx, TypeScript, Node.js
- Developed a research-oriented survey platform using **React** and **Express.js**, supporting 1000+ TPS with a p95 latency of 400ms.
- Enhanced **Axios** and **TanStack Query** clients, allowing request and response intercept.
- Introduced in-memory caching mechanism with improved system response time and read throughput by **10x times**.

Web Developer

05/2019 — 08/2019

University of British Columbia

Kelowna, BC

- **Tech stack:** React, Express.js, MongoDB, WebSocket, AWS S3, AWS Lambda
- Led a team in developing a **MERN-based** catering management system for the Okanagan catering groups.
- Developed RBAC, instant messaging and notification microservices, achieved **99.999% availability** for **100+ concurrent users**.
- Spearheaded the development of **version-based contract management**, reducing catering delays by an average of **10 hours**.

PROJECT

LLM-based Youtube Summarizer [GitHub](#) | [Demo](#)

- **Tech stack:** Spring Boot, Spring AI, gRPC, AWS Lambda
- Developed a microservice-based large language model solution that provides users with concise summaries.
- Developed a Whisper-powered AWS Lambda workflow for automatic caption generation on videos without existing subtitles.
- Using **gRPC** to improve the microservice response time from 500 ms to 100 ms with a reduction in response body size reduced by 30%.

Blog Management System [GitHub](#) | [Website](#)

- **Tech stack:** Next.js, tRPC, Tailwind CSS, PostgreSQL, Supabase, AWS, LLamaIndex, RAG
- Developed a blog system with T3 stacks using Next.js, TypeScript, Tailwind CSS, Drizzle ORM and tRPC.
- Introduced a **RAG-based** knowledge assistant using **LLamaIndex** with OpenAI APIs.
- Developed catalog, posting and commenting services with role-based authentication using NextAuth and GitHub OAuth.
- Effectively reduced image rendering time by 80% using **AWS S3**, **Lambda** and **CloudFront**.

EDUCATION

Master of Applied Data Science

09/2021 — 08/2023

University of Ottawa

Ottawa, ON

Bachelor of Science in Computer Science, Honours Program

09/2018 — 05/2020

University of British Columbia

Kelowna, BC
